North America Welcomes Its First RMGT 1060 Press Thanks to RM Machinery

The packaging industry is about to experience a new wave of innovation coming from the West Coast. In the heart of southern California near Los Angeles is a press hitherto known only to continents besides North America. Ideal for commercial printers looking to further expand in the packaging market, the 1060LX-8+CC+LD, manufactured by RMGT, found its first North American home at Boss Litho, a loyal Mitsubishi customer who has operated presses from the renowned brand for twelve years.

Founded in 2009 and currently employing 55 individuals in the City of Industry, California, Boss Litho's CEO, Jean Paul Nataf, chose the 8-color wide stock range packaging press from the RMGT 10-series to replace the company's 2007 Mitsubishi D3000 R-8. As the owner of a

company that provides its diverse portfolio of customers with solutions ranging from design to printing to delivery, Nataf needed a press he could rely on and one that would adapt to the ever-changing finishing challenges he faces. Having had much success with the Mitsubishi

brand, RMGT was the obvious choice for achieving a seamless transition at Boss Litho.

The RMGT 10-series LX is a packaging press designed to print folding cartons, posters and displays with the versatility to print other items including commercial work, direct mail marketing pieces, and transactional documents. An upgrade from the 1050 model, the 1060 allows room for an additional 10 millimeters of paper admitting a maximum sheet size of 1060 mm wide by 750 mm deep. The 1060 model's reduced blanket cleaning time, wider GUI monitor, and improved design elements to its feeder and delivery components have set new standards for progress in the pressroom.

The RMGT 1060LX+8+CC+LD was installed at Boss Litho by RM Machinery. An upgrade from the 1050, the 1060 can print paper up to 1060 millimeters wide.

CEO Jean Paul Nataf and Pressroom Supervisor Oscar Molina stand in front of the RMGT 1060LX. The eight-color press enables Boss Litho to meet its customers' demands for quick turnaround times.

Nataf consulted RM Machinery for its expertise in selecting the best press for his business. The RMGT 1060LX+8+CC+LD was the ultimate choice for Boss Litho to meet its customers' quick turnaround demands and remain competitive in the industry. As a company with ambitious plans for future growth, the 1060 model will give Boss Litho the ability to print at greater capacities.

"This machine will allow us to grow by at least six million dollars and has the capacity to print 300,000 sheets per day."

CEO Jean Paul Nataf, Boss Litho

"This machine will allow us to grow by at least six million dollars and has the capacity to print 300,000 sheets per day," said Nataf.

The first 1060LX+8+CC+LD installed in North America is equipped with eight colors plus a

coater with an extended delivery feature, a multiple-lamp LED UV curing system by GEW for the printing units, a conventional UV system (also by GEW) for the end-of-printing process in the delivery section, a UV and aqueous tower coater by Harris & Bruno, and IR and HAK dryers manufactured by Pierry in the delivery section for water-based coatings. The press also contains a closed loop scanning densitometer by X-Rite.

Speed and uptime are not just limited to the press! With a four-person team dedicated to transitioning Boss Litho from its Mitsubishi D3000 to the RMGT 1060LX with minimal

DISCOVER THE **RMGT 10** SERIES

Standard Features & Improvements

- Increased maximum paper size
- Shortened blanket cleaning time
- Plot control of the conversion curve
- Feeder design improvements
- Delivery design improvements
- Wider GUI monitor
- Lubricant sealed type bearing

Additional Components

- Eight colors plus coater
- Extended delivery feature
- Multiple-lamp LED curing system by GEW for the printing units
- Conventional UV system by GEW for end-of-printing process in the delivery section
- UV and aqueous tower coater by H&B
- IR and HAK dryers manufactured by Pierry in the delivery section for water-based coatings
- Closed loop scanning densitometer by X-Rite

downtime, RM Machinery met its installation deadline in conjunction with all other OEMs launched and operating according to schedule.
